

Joint Call for Collective Action to Accelerate Implementation of the Global Forest Goals by 2030

The first Global Stocktake of the Paris Agreement emphasized the importance of conserving, protecting, and restoring nature and ecosystems towards achieving the Paris Agreement temperature goal, including through enhanced efforts towards halting and reversing deforestation and forest degradation by 2030, and recognized the need for enhanced support and investment for these efforts.

We, the undersigned civil society organizations, Indigenous Peoples, local communities, and research institutions welcome and recognize the leadership of Brazil's COP30 Presidency in contributing to advance implementation of these agreed-upon 2030 forest goals through the COP30 Presidency Roadmap on Enhancing Efforts Towards Halting and Reversing Deforestation and Forest Degradation by 2030.

Time is running out. With less than four years remaining, the international community is still far from achieving its forest goals.

Sustained and expanded political leadership is needed to supercharge delivery of the 2030 forest goals. Countries and the international community should work together through an inclusive, multi-stakeholder implementation process through to 2030, building on and connecting existing initiatives, including an international convening in 2027 to galvanize political momentum and chart tangible solutions.

We commit to actively supporting the creation and delivery of an inclusive implementation process, in a manner that respects Indigenous Peoples' distinct rights and self-determined representation and ensures meaningful and equal participation by local communities, people of African descent and other relevant rights holders and stakeholders.

The 2030 commitments are already on the table. The Roadmap identified paths forward. What is needed now is delivery, through sustained political leadership, inclusive cooperation and collaboration for success over the next four critical years.
